1. Company Presentation

Juggle Jungle

Company Overview

Juggle Jungle is a small company specialising in juggling equipment and circus arts.

The company operates a physical store and an online shop, offering a wide range of juggling equipment for beginners, enthusiasts and professional performers. In addition to retail activities, Juggle Jungle provides weekly juggling classes, organises and participates in circus events and festivals, and offers a repair service for customer equipment.

With a team of four employees, the company combines retail, training, technical expertise and community engagement to promote circus arts and make juggling accessible to everyone.

Company Activities

Juggle Jungle's main activities include:

- Selling juggling equipment in-store
- Selling equipment through an e-commerce website
- Organising weekly juggling classes
- Organising circus events
- Participating in festivals and public events
- Repairing customer equipment
- Producing educational and promotional content for YouTube, TikTok and Facebook

Company Mission

Juggle Jungle aims to promote circus arts by providing quality equipment, expert advice and educational services while creating an active community around juggling.

Company Staff

The company currently employs four people:

- Director / Juggling Teacher
- Sales & HR Manager
- Sales & Equipment Technician (x2)

2. Current Organisation

Organisation Overview

Juggle Jungle is a small business with a handful of employees, each performing multiple tasks and fulfilling several roles. Their collaboration and efficient communication are essential to the success of the company's day-to-day operations.

Most business decisions are made by the Director, while operational responsibilities are distributed among the remaining employees according to their areas of expertise.

Organisational Structure

Position	Main Responsibilities
Director / Juggling Teacher	Company management, teaching, strategic decisions, approval of major purchases and events
Sales & HR Manager	Customer relations, supplier relations, human resources, event administration and business operations
Sales & Equipment Technician (x2)	In-store sales, stock management, equipment maintenance and customer repairs

Internal Communication

Due to its size, communication within Juggle Jungle is mostly informal, taking place through face-to-face discussions, phone calls and email.

Business information is currently spread across several independent software solutions, making it difficult to obtain a quick and comprehensive overview of ongoing activities.

Business Operations

Juggle Jungle's daily activities are organised around four core business operations.

Retail Operations (Managed by the Sales & Equipment Technicians)

The company sells juggling equipment through its physical store and e-commerce website. Sales are managed through dedicated retail systems while employees provide product advice and customer support.

Training Services (Managed by the Director / Juggling Teacher)

Weekly juggling classes and occasional workshops are organised throughout the year. These activities require available equipment, venue planning and participant registration.

Events (Managed by the Director / Juggling Teacher and the Sales & HR Manager)

Juggle Jungle regularly organises or participates in juggling conventions, festivals and public demonstrations. Each event requires planning, equipment preparation, scheduling and communication with participants, partners or event organisers.

Technical Services (Managed by the Sales & Equipment Technicians)

The company offers maintenance and repair services for customer equipment. Customer equipment is inspected, repaired and returned once the work has been completed.

3. Current Digital Ecosystem

To support its daily operations, Juggle Jungle relies on several independent digital tools, each dedicated to specific business functions. These tools allow the company to operate on a daily basis, but they are not connected to each other, which leaves room for errors, loss of information and a lack of visibility.

Current Tools

Business Area	Current Tool	Current Use
In-store sales, stock, quotes and invoices	Point of Sale software	Records physical store sales and related stock movements. It is also used to create quotes and invoices and export or print them as PDF documents.
Online sales	E-commerce platform	Sells products online and manages stock movements related to online orders.
Human Resources	Standalone HR software	Manages employee information such as contracts, absences and administrative records.
Accounting / finance	Accounting software	Stores and manages quote and invoice PDF files for financial follow-up and record-keeping.
Courses and events	Windows Calendar / Outlook Calendar	Plans weekly classes, workshops, events and external activities.
Repairs	Google Docs stored on Google Drive	Tracks customer repair requests manually. Documents are stored and organised on Google Drive.
Product documentation	PDFs and videos stored on Google Drive	Stores product information, usage guides, maintenance instructions and training resources.
Social media	YouTube, TikTok and Facebook	Publishes educational, promotional and community-oriented content.

Main Observation

Juggle Jungle's current digital ecosystem is functional but fragmented.

Each tool supports a specific activity, but the lack of connection between them makes daily work more difficult for everyone in the company.

4. Current Business Processes (AS-IS)

Juggle Jungle's current operations are structured around the following business processes.

4.1 Stock Management Process

Process owner: Sales & Equipment Technicians

Main tools used: Point of Sale software, e-commerce platform

The Point of Sale software and the e-commerce platform are the main systems used to manage sales-related stock movements, whether in-store or online.

The Point of Sale software records products sold in the physical store, while the e-commerce platform records products sold online. These systems represent the main source of information for the available stock intended for sale.

Juggle Jungle also uses equipment for internal activities such as classes, workshops, events and demonstrations, and may lend equipment to customers while their own equipment is being repaired.

4.2 Repair Tracking Process

Process owner: Sales & Equipment Technicians

Main tools used: Google Docs, Google Drive

Customer repairs are tracked manually using Google Docs stored on Google Drive.

When a customer brings equipment for repair, employees create or update a document containing the repair information. The equipment is then inspected, repaired in the store and returned to the customer once the work has been completed.

4.3 Documentation and Knowledge Management Process

Process owner: Sales & Equipment Technicians

Main tools used: PDFs and videos stored on Google Drive

Product information, maintenance instructions and training resources are currently stored as PDF files and videos on Google Drive.

4.4 Courses and Events Planning Process

Process owners: Director / Juggling Teacher, Sales & HR Manager

Main tools used: Windows Calendar / Outlook Calendar, email, phone calls

Weekly classes, workshops, events and external activities are planned using Windows Calendar or Outlook Calendar.

The calendar is used to record dates and general scheduling information. Planning a course or event also requires equipment preparation, communication with participants or organisers and coordination between employees.

4.5 Quotes and Invoices Process

Process owner: Sales & HR Manager

Main tools used: Point of Sale software, accounting software

Quotes and invoices are created through the Point of Sale software and exported or printed as PDF documents.

The PDF documents are then uploaded into the company's accounting software for financial follow-up and record-keeping.

4.6 Social Media Publishing Process

Process owner: Sales & HR Manager

Main tools used: YouTube, TikTok, Facebook

Juggle Jungle publishes educational, promotional and community-oriented content on YouTube, TikTok and Facebook.

5. Identified Issues

Juggle Jungle's organisation operates on a daily basis, but several issues arise from the existing information system and current business processes.

The main issues identified in Juggle Jungle's current organisation are:

- Information is spread across too many independent tools.
- Employees do not have a centralised view of ongoing activities.
- Repair tracking is manual and not standardised.
- Equipment availability is difficult to monitor accurately.
- Event and course planning depends on informal communication.
- Documentation is scattered and not structured as a knowledge base.
- Social media communication is not connected to operational planning.

These issues show the need for a more centralised, structured and collaborative information system.

5.1 Fragmented Information System

Apart from the Point of Sale software and the e-commerce platform, the other tools used by Juggle Jungle are not connected to each other. The HR software, Google Drive, calendars and social media platforms all operate separately.

As a result, information is spread across different systems. Employees may need to check several tools before finding the information they need, and may sometimes have to use up to three different tools to complete a single task.

5.2 Lack of Centralised Visibility

Because data is distributed across several systems, Juggle Jungle does not have a centralised operational overview.

This lack of visibility makes it harder for the Director and employees to monitor the company's ongoing operations.

5.3 Manual Repair Tracking

Customer repairs are currently tracked manually using Google Docs stored on Google Drive.

This process is flexible, but it is not standardised, even when templated PDFs are used for quotes and status tracking.

5.4 Unclear Equipment Availability

Stock management is handled through the Point of Sale software and the e-commerce platform.

These tools only track equipment intended for sale. They do not cover equipment used for classes, workshops, events, demonstrations or temporary loans to customers. These stock movements are recorded manually in a ledger.

5.5 Inefficient Event and Course Planning

Courses, workshops and events are currently planned using Windows Calendar or Outlook Calendar, with additional information shared through emails, phone calls or informal discussions.

This makes planning possible, but tedious to keep track of. Important information such as required equipment, responsible employees, participant details or preparation tasks is not centralised.

5.6 Scattered Documentation and Knowledge

Product documentation, training resources, maintenance instructions and videos are stored on Google Drive, which also serves as a source of content for social media.

This reduces the efficiency of employees when they need to advise a customer, prepare a class, repair equipment or create content.

5.7 Limited Coordination Between Communication and Operations

Juggle Jungle publishes content on YouTube, TikTok and Facebook, but social media planning is not connected to the company's operational activities.

This limits the company's ability to coordinate communication with courses, events, product documentation or promotional campaigns.

6. Business Needs

These needs are based on the issues observed in the current organisation and existing information system.

6.1 Centralised Information System

Juggle Jungle needs a centralised information system where employees can access key business information in one place.

The future system should reduce the fragmentation caused by the use of multiple independent tools. Employees should find information faster and avoid switching between several applications to complete a single task.

6.2 Internal Planning for Courses and Events

Juggle Jungle needs an internal planning system for courses, workshops and events.

Employees should be able to see upcoming activities, required equipment, responsible staff members, preparation tasks and important deadlines in one place.

6.3 Centralised Knowledge Base

Juggle Jungle needs to group product documentation, repair instructions, training resources and useful videos in one structured knowledge base.

This knowledge base should make information easier to find, update and reuse. It should support employees when they repair equipment, prepare classes or create communication content.

A structured knowledge base would also help preserve internal knowledge and make it easier for employees to share expertise or train new recruits.

6.4 External Communication

Juggle Jungle needs a better way to communicate selected information about courses, workshops and events to students, customers and external partners.

6.5 Customer and Supplier Management

Juggle Jungle needs a better way to manage information related to customers and suppliers.

Customer, supplier, equipment and administrative document records should be linked to the relevant customers, suppliers, repairs, courses or events whenever necessary.

6.6 Repair Tracking

Juggle Jungle needs a standardised repair tracking process.

Employees should be able to create repair requests, assign them to a technician, update their status and keep a history of the work completed.

6.7 Equipment and Stock Monitoring

Juggle Jungle needs to monitor not only equipment intended for sale, but also equipment used for teaching, workshops, events, demonstrations, repairs and temporary loans.

The company should be able to know whether equipment is available, sold, used internally, under repair or lent to a customer.

6.8 Task Assignment and Responsibility Tracking

Juggle Jungle needs a clearer way to assign tasks and responsibilities to employees.

6.9 Notifications and Reminders

Juggle Jungle needs notifications and reminders to help employees manage important tasks and deadlines.

6.10 Reporting and Operational Visibility

Juggle Jungle needs a clearer overview of its ongoing activities.

The Director and employees should be able to view important information such as current repairs, upcoming events, equipment availability, pending tasks and administrative activity.

7. Proposed Future State (TO-BE)

The objective is not to replace every existing tool, but to introduce ServiceNow as a central operational platform.

In the future state, ServiceNow will act as an internal operational hub. Specialised tools that already perform their role correctly will remain in place.

7.1 Future Information System Overview

Juggle Jungle's future information system will be organised around a clearer separation between specialised tools and the central operational platform.

The Point of Sale software will remain responsible for in-store sales, related sales stock movements, quotes and invoices.

The e-commerce platform will remain responsible for online sales.

The existing HR software will remain responsible for employee administration and payroll processing.

The accounting software will remain responsible for financial follow-up and accounting records.

Social media platforms will remain the tools used to publish public content.

7.2 Role of ServiceNow in the Future System

ServiceNow will serve as a control tower used by employees to manage internal operational information.

It will not replace the company's existing tools, but will connect and structure the activities that are currently difficult to follow.

ServiceNow will be used to manage:

- Repair requests
- Internal planning for courses, workshops and events
- Students and their registrations for courses and events
- Equipment used for teaching, events, demonstrations and temporary loans
- Tasks and responsibilities assigned to employees
- Product documentation and repair knowledge
- Communication preparation based on planning and knowledge content
- Administrative PDF documents linked to relevant operational records
- Dashboards and operational visibility

This future model gives employees a single place to follow internal operations, while allowing existing specialised tools to continue performing their main functions.

7.3 Future Working Model

Each important activity will have clearer information, such as a status, an assigned person, related documents and a history of updates.

8. Functional Scope

From all the information gathered, the functionalities included in the project, excluded from it and considered for future versions can now be identified.

8.1 In-Scope Functionalities

The initial solution will focus on internal operational management.

- Repair request management
- Internal course and event planning
- Student and activity registration management
- Internal equipment monitoring
- Task assignment and responsibility tracking
- Notifications and reminders
- Knowledge base management

- Communication content preparation
- Quote and invoice PDF attachments linked to relevant repairs and operational records
- Dashboards and operational visibility
- Customer and supplier information linked to operational records

8.2 Out-of-Scope Functionalities

The following elements are outside the scope of the initial ServiceNow implementation:

- Replacement of the Point of Sale software
- Replacement of the e-commerce platform
- Replacement of the HR and payroll software
- Replacement of the accounting software
- Payroll processing
- Direct automatic publishing to YouTube, TikTok or Facebook
- Creation of platform accounts for students or external partners
- Full accounting system
- Automatic integration with the external accounting or HR software
- Full commercial stock management for sales

8.3 Possible Future Extensions

Some additional functionalities may be considered in a future version of the project:

- Integration with external APIs or a dedicated social media management tool
- HR-related request tracking
- Payroll issue tracking
- Customer or student portal
- Automated communication workflows
- Automatic transfer of administrative PDFs to the external accounting or HR software

These future extensions are not part of the initial implementation, but they could improve the solution if the company's needs grow over time.

9. ServiceNow Product Backlog

9.1 Backlog Overview

The backlog is organised around the following business and platform capabilities:

- Instance identity and configuration
- Users, groups, roles and access
- Operational data and relationships across fourteen custom tables
- Forms, related lists and filters
- Task assignment and responsibility tracking
- Knowledge management
- Notifications, reminders and operational automation
- Communication content preparation
- Dashboards and operational visibility
- Functional testing

9.2 Product Backlog Table

PB-01 - Configure the Juggle Jungle instance and company identity

Priority	Must have
Business need	Provide a coherent working environment adapted to the company.
Acceptance criteria	The Juggle Jungle company record exists and the instance displays the company identity, logo and visual theme.

PB-02 - Configure employees, groups, roles and access controls

Priority	Must have
Business need	Give employees access suited to their operational responsibilities.
Acceptance criteria	The four employees belong to the appropriate groups and can access only the application areas and records required by their roles.

PB-03 - Configure repair request management

Priority	Must have
Business need	Standardise customer repair tracking.
Acceptance criteria	Employees can create, assign and update repair requests linked to the relevant customer and customer equipment, with clear status, billing status and repair information.

PB-04 - Configure equipment management

Priority	Must have
Business need	Monitor the different types and uses of equipment.
Acceptance criteria	The equipment model distinguishes shared equipment information, internal equipment and customer equipment, and supports the relationships required for repairs, activities and temporary loans.

PB-05 - Configure course, event, student and activity registration management

Priority	Must have
Business need	Centralise activity planning and participant information.
Acceptance criteria	Courses and events include scheduling and responsibility information; students can be linked to activities through activity registrations; required equipment and preparation tasks can be associated with the activity.

PB-06 - Configure customer, supplier and administrative document relationships

Priority	Should have
Business need	Connect operational information to the correct external records and documents.
Acceptance criteria	Customers, suppliers, equipment and existing quote or invoice PDFs can be linked to the relevant repair, course, event or other operational record when necessary.

PB-07 - Configure communication content preparation

Priority	Should have
Business need	Coordinate communication with operational activity.
Acceptance criteria	Employees can prepare communication content and link it to relevant courses, events, equipment or knowledge articles.

PB-08 - Configure forms and related lists

Priority	Must have
Business need	Make all relevant operational records clear and easy to use.
Acceptance criteria	The forms and related lists for the application's operational tables display the fields and linked records required by employees.

PB-09 - Configure operational lists and filters

Priority	Should have
Business need	Help employees find relevant records quickly.
Acceptance criteria	Users can display and filter repairs, activities, equipment, registrations and communication records using appropriate status, assignment, date and availability criteria.

PB-10 - Configure task assignment and responsibility tracking

Priority	Must have
Business need	Clarify responsibility for operational work.
Acceptance criteria	Repairs, activities and preparation tasks can be assigned to the appropriate user or group and followed from the relevant record.

PB-11 - Configure notifications, reminders and operational flows

Priority	Should have
Business need	Reduce dependency on informal follow-up.
Acceptance criteria	Relevant assignments, changes and important dates can trigger the appropriate notification, reminder or follow-up action.

PB-12 - Configure the Juggle Jungle Knowledge base

Priority	Should have
Business need	Centralise and organise internal documentation.
Acceptance criteria	The Juggle Jungle Knowledge base contains structured categories and published articles for product guidance, maintenance, repair and training.

PB-13 - Configure role-based dashboards and reports

Priority	Must have
Business need	Provide a clear view of ongoing operations for each role.
Acceptance criteria	Dashboards and reports display the most relevant repairs, activities, equipment, tasks, communication and administrative information according to the user's role and access.

PB-14 - Test the main functional scenarios and permissions

Priority	Must have
Business need	Validate that the solution works correctly and securely.
Acceptance criteria	The main scenarios for repairs, equipment, activities, registrations, tasks, knowledge, communication, attachments, lists, dashboards and role-based access are tested.

10. User Stories

The user stories are grouped by employee role. Their identifiers are retained to preserve traceability with the original project documentation.

Director / Juggling Teacher

US-01 - Director / Juggling Teacher

User story	As the Director, I want the ServiceNow instance to be configured with Juggle Jungle's identity so that it is coherent with the company identity.
Related backlog items	PB-01
Acceptance criteria	The instance displays the company identity, logo and visual theme, and the Juggle Jungle company record exists in the platform.

US-02 - Director / Juggling Teacher

User story	As the Director, I want each employee to have a user account, group and role so that access to the platform is adapted to their responsibilities.
Related backlog items	PB-02
Acceptance criteria	The four employees can access the platform with the correct permissions according to their role.

US-06 - Director / Juggling Teacher

User story	As the Director, I want to plan courses, workshops and events in ServiceNow so that preparation and participant information is centralised.
Related backlog items	PB-05, PB-08, PB-10
Acceptance criteria	A course or event can include its schedule, location, responsible employee, required equipment and preparation tasks, while participating students can be linked through activity registrations.

US-10 - Director / Juggling Teacher

User story	As the Director, I want to view operational dashboards so that I can monitor repairs, upcoming activities, equipment availability and pending tasks.
Related backlog items	PB-13
Acceptance criteria	The Director has access to a dashboard showing current repairs, upcoming activities, equipment availability, pending tasks and administrative document status.

Sales & Equipment Technician

US-03 - Sales & Equipment Technician

User story	As a Sales & Equipment Technician, I want to create and update repair requests so that customer repairs can be tracked in a structured way.
Related backlog items	PB-03, PB-08, PB-10
Acceptance criteria	A technician can create a repair request, assign it, update its status and add repair and completion notes.

US-04 - Sales & Equipment Technician

User story	As a Sales & Equipment Technician, I want to view the status of a repair request so that I can quickly answer customer questions.
Related backlog items	PB-03, PB-09
Acceptance criteria	Repair requests can be filtered by status, technician or customer, and the current repair and billing statuses are clearly visible.

US-05 - Sales & Equipment Technician

User story	As a Sales & Equipment Technician, I want to update equipment availability so that the team knows whether equipment is available, under repair, used for an activity or temporarily lent.
Related backlog items	PB-04, PB-08
Acceptance criteria	Internal equipment records can be updated with condition, availability, usage, loan and maintenance information.

US-08 - Sales & Equipment Technician

User story	As a Sales & Equipment Technician, I want to access repair guides and product documentation so that I can advise customers and repair equipment more efficiently.
Related backlog items	PB-12
Acceptance criteria	Published knowledge articles are organised into clear categories for product guidance, maintenance, repair and training.

US-11 - Sales & Equipment Technician

User story	As a Sales & Equipment Technician, I want to receive reminders or notifications when I am assigned work or when a deadline is approaching so that I do not miss important tasks.
Related backlog items	PB-11
Acceptance criteria	The technician receives the relevant notification or reminder for configured assignments, changes and approaching deadlines.

Sales & HR Manager

US-07 - Sales & HR Manager

User story	As the Sales & HR Manager, I want to assign material and personnel for events or operational tasks so that each employee knows what they need to do.
Related backlog items	PB-05, PB-10
Acceptance criteria	A course or event can include assigned staff, required equipment and preparation tasks.

US-09 - Sales & HR Manager

User story	As the Sales & HR Manager, I want to prepare communication content linked to courses, events or knowledge articles so that social media communication is easier to organise.
Related backlog items	PB-07, PB-08
Acceptance criteria	A communication content record can be created and linked to a course, event, equipment item or knowledge article.

US-13 - Sales & HR Manager

User story	As the Sales & HR Manager, I want existing quote and invoice PDFs to be attached to the relevant repair records so that operational and billing information can be followed from the same place.
Related backlog items	PB-03, PB-06
Acceptance criteria	A quote or invoice PDF can be attached to the relevant repair request, linked to the appropriate customer and equipment information, and followed using the billing status field.
